

BD_SW_3BX_08 (type A or B)

Start – Stop/Run - Rain - 3 button handlebar race switch for fitting directly onto the brake clamp.

Kawasaki ZX6 / ZX10 – 2011 > 2015

This switch is a direct replacement for the standard Start / Kill switch assembly found on the ZX6/10. Designed for use on race bikes which need an additional latching switch for the rain light, or need to save space on the handlebar.

The rain light is pre-wired into the original brake light wiring circuit so control of the ‘stop light’ can be achieved simply by pressing the yellow button.

Rugged machined aluminium enclosure and fully sealed IP67 switches.

Two versions of this are available:

- Type A for standard 32mm spaced clamp bolts
- Type B for 30mm offset clamp bolts as found on some Brembo products

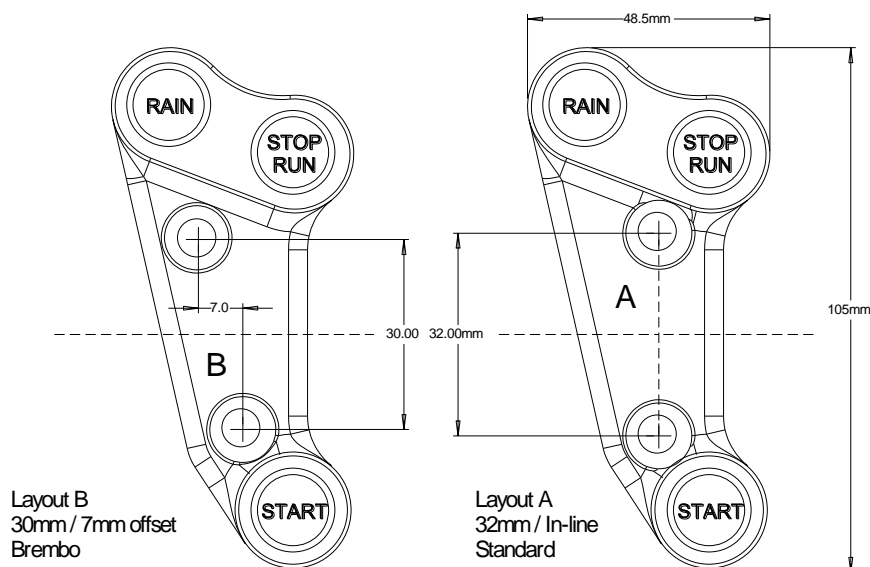

No modification of the bike wiring is necessary, this kit plugs directly into the black 6 way connector of the standard wiring loom. Each switch is also supplied with mating connector contacts enabling custom wiring installations to be created.

Function:

Red	Run / Stop	Latching
Green	Starter	Momentary
Yellow	Rain light	latching

Fitting note – Tighten by hand the upper bolt first, then fully tighten the lower bolt, followed by the upper bolt. Use manufacturer recommended tightening torques.

Electrical / Mechanical Characteristics

Wire..... Type 55 / 24
 Switch sealing IP67
 Housing.....Aluminium
 Coating..... Black anodise

Dia (handlebar)22mm (7/8")
 Max width 20.5 mm
 Min width at centre 13.5 mm
 Weight 95 g
